## ELECTRONIC BILATERAL CONSOLES

### Bridge

Model IC-19

Model IC-09

Model IC-04

This agile system allows instant communication between one or two main points (command consoles) and the remote points. Its main advantage is simplicity of operation as the communication from the remote location to the console is hands-free and the console commands all the operations.

An acoustic system complements the light signal when the operator is not near the console.

- Metallic cabinet, fine finishing and button board for intensive use make the Intercron console a reliable piece of equipment.

#### Optional:

- The system allows the installation of another console in parallel or independently.

## “SEMI-HANDS FREE” REMOTES

### Interior

#### Model IC-RT

- Push button for calls to the console.
- Cancel button.
- Made of high-strength ABS plastic.

The remote “semi-handsfree” intercom systems feature an ultra-linear omnidirectional electret microphone and a high-impedance speaker, achieving an excellent-quality transmission/reception
